IN THE CLAIMS

Please amend the claims as follows:

1. (Currently Amended) A method of adhering a first member to a second member via an intermediate member, said method comprising:

positioning said first member and said second member relative to each other; applying a first adhesive to a first surface destined to comprise a first interface between said first member and said intermediate member;

applying a second adhesive to a second surface destined to comprise a second interface between said second member and said intermediate member;

contacting said first member to said intermediate member via said first adhesive to form said first interface;

contacting said second member to said intermediate member via said second adhesive to form said second interface; and

curing said first adhesive and said second adhesive <u>using UV light</u> such that said intermediate member, but not said first and second members, can move due to shrinkage of at least one of said first adhesive and said second adhesive, <u>wherein said curing step includes</u> filtering said light such that a color of said intermediate member is maintained,

wherein, after curing, said first member and said second member are fixed to said intermediate member and therefore fixed to each other.
